

Good and bad design

Good design: Youtube

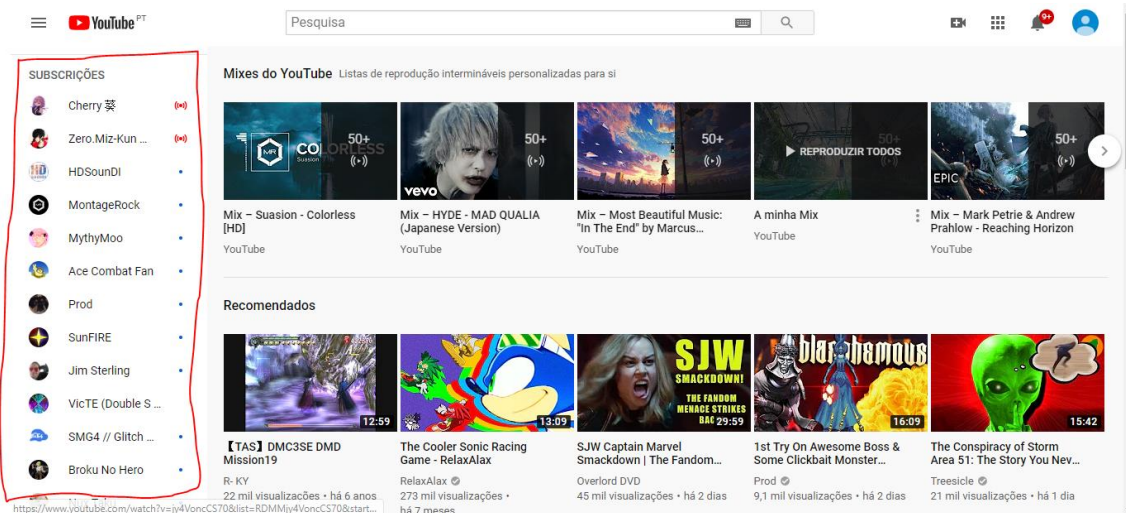

Fig 1 - Youtube Main Page

Youtube's objective is to serve as a platform to watch videos. For that purpose, it's well organised. Most of the page is filled with recommendations of videos based on the ones previously watched.

The main issue in the main page is the subscriptions. For some reason it's completely disorganised. The way I see it, it should be organised by alphabet or, at the very least, give the option to search by text the subscription I currently wanted to find.

Fig 2 - Video Page

When watching a video, the video itself that the majority of the screen (it is the reason we come to this platform after all) and anything related to that video is below it (title, description, comments, etc) at the right of the video are other videos that the user might want to see after the currently being watched.

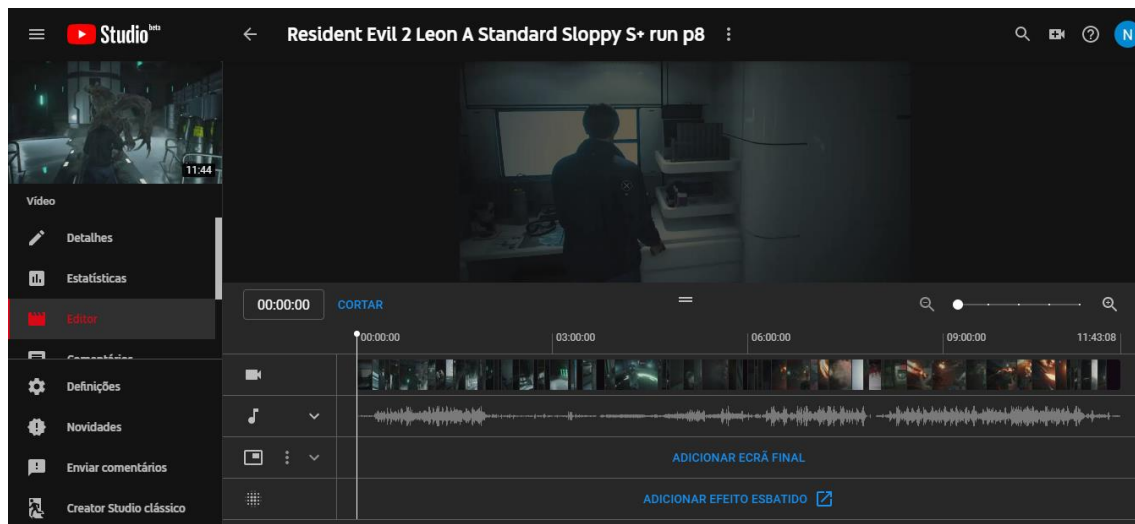

Fig 3 - Video editor

The video editor on the other hand is not very intuitive. As you can see in Fig 3, the editor displays a lot of information but, it's hard to understand what you can do with each part. I would recommend first ask what the user wants to edit and then display the tools for that objective.

Bad design: FCT Clip

Fig 4 - FCT Clip Main Page

For every student that studies in FCT, it's necessary to use this platform daily due to the majority of the important information being here. Therefore, it's necessary to be easy to understand where everything is. Anyone that sees Fig 4 immediately that is not the case.

In order to see the schedule in a classroom, we need to go to General Information, 2019/20, schedules, 1º Semester and then which department.

Fig 5 - General Information Page

Another issue is that first times don't know that the buttons marked in Fig 5 are actual button which leads to more confusion.

To be honest I have no idea how to fix these issues besides if possible restarting from scratch.
